PROFESSIONAL SUMMARY

Frontend Software Engineer experienced in building web applications and system integrations with React, Next.js, and TypeScript. My work spans online storefronts, SDKs, payment connectors, and checkout experiences in e-commerce and payment technology. I combine a focus on performance, user experience, and maintainability with AI-assisted engineering workflows, from research and planning through implementation and validation.

PROFESSIONAL EXPERIENCE

Yuno | February 2026 – October 2026

Frontend Software Engineer

- Developed and maintained SDKs, checkout experiences, and payment integrations in collaboration with Product, Design, and Backend teams.
- Implemented features in the Yuno plugin for VTEX: payments for orders with multiple sellers, recurring payments, and additional charges when order totals change after checkout.
- Built an enhanced Apple Pay and Google Pay checkout experience that removes an intermediate screen and takes users directly to the wallets' native flows.
- Improved error handling and response times in the VTEX payment connector, including a 20-second response deadline, to mitigate failures that contribute to Contingency Mode activation.
- Developed, maintained, and published the Yuno plugin for WordPress to process payments in WooCommerce, addressing official review feedback from the WordPress Plugin Directory.
- Created Yunex, an assistant specialized in the Yuno–VTEX integration, with a knowledge base and skills for incident investigation using Datadog logs. Automated knowledge updates through Claude routines, with daily Slack notifications.
- Used Claude Code daily and designed skills and workflows with agent teams for research, planning, implementation, and documentation. Validated changes through code review, testing, and pre-production checks; also contributed to public plugin documentation.

ITGlobers | October 2022 – February 2026

Mid-level Frontend Developer | April 2025 – February 2026

- Developed e-commerce solutions on VTEX for clients across Latin America, Europe, and Asia, adapting interfaces and applications to business requirements.
- Built custom applications and integrations with React, TypeScript, VTEX IO, and GraphQL, focusing on maintainability and performance.
- Optimized resource loading and interface responsiveness, and resolved layout shifts caused by late rendering.
- Contributed to development estimation and planning, collaborating with multidisciplinary teams to define deliverables and address requirements.

Frontend Developer | October 2022 – April 2025

- Developed VTEX storefront interfaces, including home, product listing, product detail, checkout, order confirmation, and login pages.
- Implemented reusable components and responsive layouts, collaborating with design and development teams to maintain a consistent user experience.

SKILLS

Frontend: React, Next.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, Sass.

Platforms and integrations: VTEX IO, FastStore, GraphQL, SDKs, checkout, and payment connectors.

AI and tools: Claude Code, skills, and agent workflows; Git, GitHub, Datadog, Figma, and Jira.

Quality: Vitest, Playwright, Jest; code review and pre-production validation.

EDUCATION

Universidad Nacional de Colombia | Software Development Diploma | April – December 2022

Platzi | Web Development Program | January 2022

Universidad Externado de Colombia | Tourism and Hospitality Management | 2014 – 2020

LANGUAGES

Spanish: native. English: C1 (IELTS certification).
